

SEE WHAT OUR PROVIDERS ARE SAYING

"We conducted a clinical evaluation on two different male patients with diabetic foot ulcers that have been recurrent for 2 or more years. After 4 weekly treatments, ActiGraft had facilitated the resolution of both wounds. ActiGraft has proven to be an efficient and both, time and a cost-effective solution to chronic, stalled and vascularly compromised wounds."

Georgeanne Botek, D.P.M.
Cleveland Clinic

"ActiGraft autologous blood tissue provides a unique wound care therapy that is both effective and cost efficient. As an adjunct to wound bed preparation, ActiGraft represents an important modality in expediting wound closure in many of my patients in both randomized controlled trials and clinical practice. I would highly recommend ActiGraft to other clinicians. This lower cost, fast healing solution has the potential to change the standard of care and the associated cost structures/budgets."

Robert J. Snyder, D.P.M.
Barry University of Podiatric Medicine

"In my experience ActiGraft delivered fantastic results for my patients. We were able to truly heal some of the most difficult wounds in a short amount of time. It gave us great satisfaction to be able to heal these very chronic non-healing wounds."

Naz Wahab, M.D.
Wound Care Experts

"ActiGraft provides a very unique wound care solution. ActiGraft was able to heal our surgical wounds, all while making the patient happier and more compliant in their after-surgery-care. ActiGraft is truly a win-win solution for patients, practitioners and hospitals. I would highly recommend ActiGraft to other clinicians and to government entities."

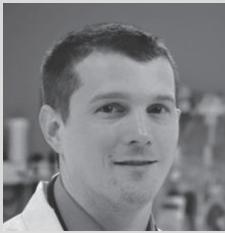

Adil Kabeer, M.D.
The Orthopedic Institute

"I endorse ActiGraft as it uses the body's own healing cascade to help initiate the wound healing process, and has a unique role as a topical dressing in the wound care space."

Bryan Doner, D.O.
D&P Medical Group

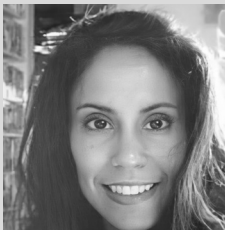

"ActiGraft is part of my practice and has been now for the last 3 years. The ease of use and the clinical outcomes we've seen in our patients are remarkable. We've managed to heal wounds that had been non-responsive to other treatments. The simplicity of the procedure, taking only about five minutes for preparation, has not disrupted our clinic workflow, making it an ideal solution for our busy practices. Its superiority over other skin substitutes is undeniable. ActiGraft is functional, and cost effective, a rare combination, if not non-existent. I would recommend it without question."

Samuel Zerkle, D.O.
Emergency Medicine, Wound Management, Genesis Healthcare System, Ohio

"ActiGraft has been a great addition to our product portfolio, significantly improving our patient outcomes in wounds that otherwise have stalled or failed other treatment options. The procedure is streamlined, and patient engagement is improved due to observable results weekly. Our staff is thrilled to participate with the patient's procedure in delivering improved outcomes with patient excitement."

Stephen Heisler DPM, MHSA
Assistant Professor of Surgery

"ActiGraft has been a great innovative product and addition to our product portfolio. Efficiency is crucial in our clinic due to the volume and complexities of advanced wound care and this process is not only straightforward and quick, but it also integrates well with our standard of care, staff and patients. We have experienced excellent results and will continue to use and recommend ActiGraft. Healing time was significantly reduced, increasing patient satisfaction and overall outcome. The support from the organization is on point and the education, training and consistency is another reason for choosing this product."

Maria Edge, MHA, MSN, RN, IP-C
Blount Memorial Wound Care Center Manager

"In 26 years of doing wound care I have never used a product that gives more consistent results than ActiGraft. I plan to start most of my treatments with ActiGraft due to its excellent results and the exceptional support from the company. The ease of use improves our clinic flow, taking only a few minutes between preparation and execution. It has allowed me to close chronic wounds, like sickle cell wounds in record time."

Steven Wells, DPM, PhD
Diabetic Foot Centre Group CEO
